

Glowforge Pro

Company

Glowforge was founded last year by Shapiro, the brains behind the hit kids board game [Robot Turtles](#) — one of [Kickstarter's most successful campaigns ever](#) — and fellow Seattle area startup veterans [Tony Wright](#) and [Mark Gosselin](#). The company employs 14 people and will ship the Glowforge to customers who pre-ordered starting in the first half of 2016.

Product

Released in 2014, GlowForge has made its name as one of the best laser printers in today's age. This is due to its speed, efficiency, size, and wide variety of materials it is able to cut. This is most seen in the 2018 Glowforge Pro, which is larger and faster than the other models and is beneficial for small business in which multiple people would be using it.
